Education

MSc in Information Science
Oct 2020 - Mar 2023

Japan Advanced Institue of Science and Technology

I pursued a Master's degree at JAIST, under the esteemed guidance of Professor Nakyoung Chong. Throughout this period, my research interests expanded to encompass diverse areas such as medical image analysis, AI robotics, and game matching strategies. The focal point of my Master's thesis was the intricate task of ultrasound image segmentation, an area where I applied my skills and knowledge to contribute to the field.

BSc in Information Security
Sep 2015 - Jun 2019

Hefei University of Technology

During my undergraduate years, I devoted my focus to exploring the applications of deep learning in the field of information security. Notably, I was honored to receive the university scholarship in both 2017 and 2018, acknowledging my academic achievements during that time. Moreover, I had the privilege of participating in the College Students' Innovation and Entrepreneurship Competition in 2018, where my project received a prestigious provincial prize. Additionally, I achieved a commendable 3rd prize in the National College Student Information Security Contest for the same project I worked on.
